

Eric Campbell

Founding / Principal Engineer · 0→1 Builder · AI-Native Products

ericcampbell.dev · linkedin.com/in/ericcampbell59 · Dallas, TX (*open to SF relocation*) · ericcampbell59@gmail.com

Engineering leader and 0→1 builder with 15 years of experience. I build products from low-level systems and protocol design to TypeScript/React and AI infrastructure. I was a founding or principal engineer on products acquired by **Ford, Nest, Bird, and Google**, and I originated Zapier **Forms and Interfaces**. Now I build Stack0, an autonomous product stack.

Core technologies: TypeScript/JavaScript · Python · Ruby · Go · React/SSR · Node.js · Rails · LLM application development · agent orchestration · MCP · evals · realtime sync · distributed systems · API/SDK design · UI/UX & product design

EXPERIENCE

Stack0 – The Autonomous Product Stack

Nov 2022 – Present · Dallas, TX

Founder & Principal Engineer

- Founded and built **Stack0**, an autonomous product stack where agents build, deploy, monitor, operate, and iterate on software.
- Built **Pylon Sync**, a full-stack, real-time framework in Rust and TypeScript.
- Built the platform across TypeScript, Python, Ruby, and Go. It includes typed schemas, realtime sync, row-level authorization, server functions, SSR React, deployment, agent workflows, and APIs for email, storage + CDN, video, extraction, and screenshots.

Flow Auctions – AI-Native Auction & Collectibles Software

2024 – Present · Dallas, TX

Co-Founder

- Co-founded the company and built its three products, all in production with paying customers: **Flow Auctions**, a Shopify-style commerce platform for live and timed auctions; **Flow Dealers**, a B2B marketplace for dealers; and **CoinManagerPro**, an AI-native inventory management system.
- AI workflows at the core: lot descriptions, pricing, marketing assets, and email campaigns.

Zapier – 0→1 products, two live today

Jan 2020 – Oct 2022 · Remote

Principal Engineer, Labs (contract)

- Principal Engineer on Labs, Zapier's 0→1 product incubator: find the gap, build the product across the full stack, launch it, hand it off.
- **Ideated and launched Forms and Maker** (the precursor to Interfaces); also worked on Tables and Interfaces. Some bets succeeded, some failed. Maker was shut down, and its lessons fed Interfaces.
- **Forms and Interfaces are live Zapier products today**, years after handoff to teams I never managed.

New Wave Capital – SEC-Registered Crypto Robo-Advisor

Nov 2016 – Apr 2019 · San Francisco

Founder, CEO & CTO

- Founded and built a cryptocurrency robo-advisor (SEC-registered investment advisor); designed and engineered the full product and brand end to end.

Chariot – Acquired by Ford Motor Company (2016)

Jun 2015 – Oct 2016 · San Francisco

Chief Technology Officer (joined as Senior Engineer → Lead → CTO)

- Led the backend and web apps for on-demand commuter shuttles: the **proprietary ETA system**, live vehicle tracking, and the admin dashboard. (YC W15 company.)
- Built the **charter booking system**, the company's highest-revenue product.
- Designed and built the **reverse-commute algorithm** that generated revenue on the return leg of trips.

VikingIO – Reliable-UDP Infrastructure Framework

Feb 2014 – May 2015 · San Francisco

Founder

- Built an application framework and infrastructure-as-a-service for scalable connected servers on a **proprietary low-bandwidth, high-frequency reliable-UDP protocol**.

Sphere (formerly TourWrist) – Acquired by Google

Jan 2012 – Dec 2013 · San Francisco

Chief Technology Officer

- Led cross-platform panoramic imaging. Built the **C/C++ image-processing & stitching pipeline**, the cross-platform **C/C++ OpenGL 3D mobile rendering engine**, the Rails backend/API, and the iOS & Android apps.
- 1M+ users; featured 600+ times by Apple; **co-inventor on multiple panoramic-imaging patents**.

Scoot Networks – Acquired by Bird

Nov 2011 – Jul 2012 · San Francisco

Founding & Lead Engineer

- First electric scooter-share company. Built the original platform end to end, **Ruby on Rails backend, iOS app, and C-based firmware integration**, that ran the business through to its acquisition.

MyEnergy – Acquired by Nest

Sep 2009 – Nov 2011 · Boston, MA

Founding & Lead Engineer

- Led development on the full product: the **utility-account scraping system**, the **ETL pipeline**, and the web app.
- The platform connected household utility accounts and showed electric, gas, and water usage in one dashboard.

PATENTS

Co-inventor, multiple panoramic / spherical imaging patents.

EDUCATION

University of Nebraska-Kearney – Computer Science (Comprehensive)

Did not complete. Left because of MyEnergy.
